

## SEASONAL COURSES DON'T BE CAUGHT OUT!

The spring and summer temperatures in 2018 took us all by surprise not only how high the temperatures were but also the length of time the temperatures lasted.

These temperatures are great if you are on holiday but for those who are working on the rail infrastructure, I'm sure you will appreciate the problems that they can cause especially on disturbed worksites.

The Met Office has predicted similar temperatures for this year.

Are you and your team ready and prepared to tackle these extreme temperatures to ensure the safe passage of traffic after the completion of the works you have carried out?

### Hot Weather Patroller

To ensure correct monitoring of sites during and after completion of works that has or could potentially disturb the ballast and track geometry.

### Critical Rail Temperature Management

To ensure that all work sites that have disturbed ballast have the correct monitoring process in place for the safety of the line.

### Extreme Weather Precautions

To ensure that the track is correctly protected through all extreme weather conditions covering heat, freezing temperatures and flooding.

If you would like more information on the above training courses or wish to reserve a place, please call the office on 01332 360033.

Courses are subject to maximum numbers therefore availability is limited and additional dates may be scheduled. Please contact us on 01332 360033 or email us at [enquiries@neway-training.com](mailto:enquiries@neway-training.com). Courses are delivered at our Training Centre in Derby, offering excellent facilities and trackside access which allows delivery of both classroom and practical training. Alternatively we can deliver bespoke courses at a location of your choice.
